Installation dimensions for Offset installation

*Feel Free to modify this drawing to include the specifics of your situation.
 Add molding detail, additional trim, or storm windows if installed.*

of similar windows _____ Situation (MI, OP) _____

Dim	What and Why we need to know	Measurement
A	The full width of the casing where the pintles install. This dimension is most important since it will determine the type of pintle that can be used.	
B	The depth available from the face of the case to accept a closed shutter. Measure the minimum available space. If there are storm windows installed, measure to them.	
C	Dimension from face of case to the face of the structure. The infamous "offset".	
D	Thickness of shutter. Just to make sure everything will work as planned.	
E	Width of shutter stile. We like to place the first fastener in the middle just so it looks right.
